

HR Analytics Dashboard – Business Insights

Overview

This HR Analytics Dashboard analyzes employee attrition, salary trends, workforce distribution, and employee satisfaction to identify key factors affecting employee retention.

Key Insights

1. Attrition Rate is Significant

The overall attrition rate is **16.12%**, with **237 out of 1470 employees** leaving the company. This indicates notable employee turnover and potential retention challenges.

2. Research & Development Faces Highest Attrition

The **Research & Development department** recorded the highest employee exits, followed by Sales. This suggests workload, role pressure, or career growth concerns in these departments.

3. Mid-Career Employees Leave More

Employees in the **Mid-Career age group (30–45 years)** showed the highest attrition. This may indicate dissatisfaction related to compensation, growth opportunities, or work pressure.

4. Overtime Strongly Impacts Attrition

Employees working **overtime** showed higher attrition compared to those without overtime. Excessive workload appears to negatively affect retention.

5. Business Travel Influences Employee Turnover

Employees who **travel frequently** or **travel rarely** experienced higher attrition than non-travel employees, suggesting travel-related stress impacts job satisfaction.

6. Salary and Job Role Patterns

Higher-paying roles such as **Manager** and **Research Director** have better retention, while lower-income roles show comparatively higher attrition risk.

7. Work-Life Balance Matters

Employees with poor **work-life balance** and lower **job satisfaction** are more likely to leave, highlighting the importance of employee well-being.

Recommendations

- Reduce overtime workload to improve employee retention
- Improve career growth opportunities in R&D and Sales
- Review compensation for lower-income job roles
- Enhance work-life balance policies
- Focus on employee engagement and satisfaction programs
